

# Manual Handling

Manual handling causes over a third of all workplace injuries. These include work-related musculoskeletal disorders (MSDs) such as pain and injuries to arms, legs and joints, and repetitive strain injuries. The AssessNET Manual Handling module helps to ensure your employees and contractors understand the workplace risks in relation to lifting and carrying activities, and how to avoid injury.

## Key Features

Apply a risk matrix to align with your policies and processes

Rely on full version control for traceability, transparency, ISO 45001 and HSG65 compliance

Attach supporting documents, images and notes

Complete the Manual Handling assessments quickly and easily, with minimal typing required

Link assessments to associated incidents via integration with your Incident module

Provide quick access to assessments via our easy-to-use Employee Portal
