

RAMS Project Management

Manage an entire project or work process, drawing key compliance information from across any AssessNET module.

An effective RAMS file goes beyond creating the Risk Assessments and associated Method Statements related to a job, and that's where AssessNET RAMS comes into it's own.

Streamline health and safety processes associated with a task-specific Safe System of Work (SSoW):

- Centralise key compliance information into one point of truth
- Bring all actions, notes and lessons learnt together into one RAMS file
- Allocate and review the status of tasks

Identify and control health and safety risks and maintain legal compliance:

- Create a consolidated risk rating for an entire project based on all Risk Assessments relevant to it
- View your dashboard for an instant view of the status of all RAMS files
- Identify pending and outstanding actions quickly and set escalation notifications on overdue tasks
